

## ENTRANCE MATTING - ENTRAGUARD

EntraGuard is a heavy duty aluminium entrance matting system, designed for commercial areas. It is easy to install due to its patented locking system, and is designed to give excellent performance due to its 100% aluminium structure, with no joining wire or joint pieces.

### Cleaning & Maintenance

Regular vacuuming is essential to ensure Entraguard keeps its appearance and effectively wipes off dirt and moisture. It is not necessary to lift the mat to clean it, as the aluminium grooves catch the dirt, which can then be cleaned with a vacuum cleaner.

If a wiper strip becomes damaged or stained, rather than replacing the whole, or a section of the mat, the wiper strip can be simply replaced by taking up and replacing the wiper strip only – these are available from Duraflor. It is recommended that a line of adhesive is applied to the back of the wiper strip.

For further advice, please contact our technical department, who will be happy to advise on the correct methods to use and can help you put together an effective cleaning programme.
